

Joanna Obuchowska was working in Turku in Luostarivuori school from March to May 2017. She got an Erasmus scholarship and chose to come to Finland to learn more about our educational system.

Joanna was very motivated and anxious to follow our lessons and study pedagogics of Finnish schools. After a very short period of following she was willing to take a lot of responsibility in teaching children in different groups and subjects. She made great suggestions for different topics and methods according to what she had observed during classes.

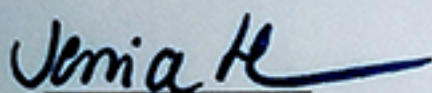

Joanna Obuchowska has got a lot of ideas and visions. She is very effective and productive. She has a very good contact with the children and with her colleagues. She is ambitious and she is working very hard and effectively. Joanna is self-imposed and became very soon a natural member of our staff and everyday school routines. She likes to share her thoughts and ideas.

Joanna Obuchowska learned a lot during these 3 months because she was so active and interested about our school system and how it works in practice. She made a lot of questions to get more information and explanations why we were working as we did. We had many good and deep going discussions and not only Joanna learned new things. She gave us Finnish teachers valuable ideas and new views about our school system and everyday life as well as how to meet and help students and groups with some specific problems.
